Welcome to a New Level of At-Home Dental Care

The Interplak® Deluxe Water Jet enhances oral hygiene and significantly contributes to healthy gums when used as part of a responsible oral health management program. It is particularly effective at cleaning around orthodontic appliances, fixed and removable bridge work, implants and splints, and it provides valuable gum massage with every use.

Remember: Oral irrigation is a supplement to, not a substitute for, your oral hygiene routine. Ask your dental health care provider to advise you on how the Water Jet can most effectively meet your specific oral needs.

IMPORTANT SAFEGUARDS

READ ALL INSTRUCTIONS BEFORE USING

• DO NOT use the unit while sitting.
• ALWAYS unplug the product immediately after using.
• DO NOT place or store the unit where it can fall or be pulled into a tub, sink, or toilet.
• DO NOT use for anything other than oral hygiene.
• DO NOT use the unit for any other purpose.
• Always allow this unit to cool off before placing it in storage.
• Unplug the unit from the outlet when not in use.

Initial Preparation

Before using your Deluxe Dental Water Jet for the first time:

1. Turn the pressure control completely to the left and then to the right. Repeat a few times to release any trapped air. This can be done for 5 seconds or up to 30 seconds to ensure that air is released.
2. Press the Water Stop Button. This will allow first tank to empty completely.
3. Switch the Dual Tank Control to the other position. Repeat step 5 to empty the second tank.

T A N G E R E D  t o  r e d u c e t h e r i s k  o f  e l e c t r i c a t i o n :

• Replace the unit immediately if it is damaged.
• DO NOT use this product for any other purpose.
• DO NOT use if it is not working properly.
• Do not unplug your unit by pulling on cord. Always grip the plug and pull.
• DO NOT use in water or any other liquid.
• DO NOT use in any other way.
• DO NOT use if the plug is damaged.
• Use only attachments recommended by the manufacturer.
• Never use while drowsy.
• Keep the cord away from heated surfaces.

SAVE THESE INSTRUCTIONS

MEDICAL WARNING

For your safety

• When you start any new oral hygiene program, your teeth and gums may initially bleed slightly. Contact your dentist if excessive bleeding occurs or if bleeding continues after two weeks of use.
• Be sure that only the water jet nozzle touches your teeth and gums. Damage to teeth and gums may occur if any other part of the unit touches them.
• This product is designed for oral cleaning only. DO NOT use for any other purpose.
• As with any other new oral hygiene program, individuals with heart problems should check with their physician prior to using the Interplak® Dental Water Jet, and should always exercise particular care with any oral hygiene device.
• The Interplak® Deluxe Water Jet is a personal care unit and should be intended for household use only.

WARNING Changes or modifications to this unit not expressly approved by Conair could void the user’s authority to operate the equipment and void limited warranty. Servicing should always be referred to an Authorized Service Center.

P o t e n t i a l  r i s k s  c o n t a i n  t h e  u n i t:

DANGER

To reduce the risk of burns, electrocution, fire, or injury:

• Never operate the unit if it has a damaged plug if it is not working properly, or if it has been dropped or damaged, or if it has been immersed in water. Refer to an Authorized Service Centre for repair.
• DO NOT excessively bend or pull the cord. Unplug the unit by grasping the plug — NOT THE CORD.
• Keep the cord away from heated surfaces.
• Close supervision is necessary when this product is used by, on, or near children or disabled persons.
• Use this product only for its intended use as described in this manual. Only use attachments recommended by the manufacturer.
• Never use while drowsy.
• DO NOT store the unit or any part of it in water or in any other liquid.

Instructions For Use:

1. Remove dual tank and fill each tank with one of the following solutions:
   - Water .................................. to flush away food debris.
   - Mouthwash ...................... to wash away debris and bacteria, reducing the number of oral microorganisms. Provides short term halitosis control and leaves mouth tasting fresh and clean.
   - Antibacterial Rinse ...... recommended for the treatment of periodontal conditions and control of dental cavities, bacterial plaque and gingivitis.

2. Place dual tank securely onto Water Jet base.

3. Attach selected Tip to the handle.
   - Standard Tip .................... removes trapped particles from between teeth.
   - Subgingival Tip ............... uses a soft rubber tip to massage the gums and safely deliver solution into the gingival pockets below the gumline.
   - Brush Head Tip.............. loosens debris and larger food particles before flushing them away – ideal for all dental work, including fixed and removable appliances.

4. Select the tank you want to use first by switching the Dual Tank Control to the desired position. You can alternate between tanks during oral irrigation. For example, use water to remove all food and debris first, and then switch to the other tank containing mouthwash or an antibacterial rinse for extra cleaning and protection.

5. Hold the handle over the sink; turn the Water Jet on.

6. Select the pressure you want by adjusting the Pressure Control. It is recommended that you select the lowest setting first and gradually increase water pressure until it is comfortable.

7. Press and hold the Water Stop Button to temporarily halt the flow of liquid while you place the Tip into your mouth.

8. The direction of flow from the Tip can be controlled by twisting the Tip to the desired position on the handle.

9. Leaving the sink with the Tip in your mouth, release the Water Stop Button to begin flow. Keep your mouth slightly open, tilt your face toward the sink, and hold your elbow at mouth level to prevent water or rinse from running onto your hand.

10. Direct the Tip to the appropriate area of the teeth or gums:
   - Standard Tip - direct flow toward areas in between teeth. To prevent damage to delicate tissue, do not point directly toward gums.
   - Subgingival Tip - use with gentle pressure, directing flow just under the gumline.
   - Brush Head Tip - position against tooth surface at 90 degree angle, focusing the spray on the area between teeth, and using a gentle brushing motion.

11. Move the Tip around the mouth sequentially until you have treated all areas in need of oral irrigation.

12. If unit has not been used for some time, please refer to initial preparation section.

2 Year Limited Warranty

Conair warrants to the owner of this Interplak® Dental Water Jet that it is free from defects in materials and workmanship for a period of two years from the original date of consumer purchase. This warranty does not cover damage to the product as a result of misuse or accident and does not apply to attachments, IN NO EVENT SHALL CONAIR BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES if the product becomes defective in warranty (2 years from date shown on receipt) or out of warranty call 1-800-472-7606. When returning your Interplak® Dental Water Jet in or out of warranty, add $7.50 for postage and handling; this warranty gives you specific legal rights, and you may also have other rights which vary from province to province.

Welcome to a New Level of At-Home Dental Care

The Interplak® Deluxe Water Jet enhances oral hygiene and significantly contributes to healthy gums when used as part of a responsible oral health management program. It is particularly effective at cleaning around orthodontic appliances, fixed and removable bridge work, implants and splints, and it provides valuable gum massage with every use.

Remember: Oral irrigation is a supplement to, not a substitute for, your oral hygiene routine. Ask your dental health care provider to advise you on how the Water Jet can most effectively meet your specific oral needs.

IMPORTANT SAFEGUARDS

READ ALL INSTRUCTIONS BEFORE USING

• Never operate the unit if it has a damaged plug or if it is not working properly. If it has been dropped or damaged, or if it has been immerged in water. Refer to an Authorized Service Center for repair.

• DO NOT excessively bend or pull the cord. Unplug the unit by grasping the plug – NOT THE CORD.

• Never use while drowsy.

Remember:
Oral irrigation is a supplement to, not a substitute for, your oral hygiene routine. Ask your dental health care provider to advise you on how the Water Jet can most effectively meet your specific oral needs.

DAnger To reduce the risk of electrocution:

• DO NOT use the unit while bathing.

• ALWAYS unplug this product immediately after using.

• DO NOT place or store the unit where it can fall or be pulled into a tub, sink, or toilet.

• DO NOT reach for a unit that has fallen into water; unplug it immediately after using and do not reach into the water under any circumstances.

• Be sure that only the water jet nozzle touches your teeth and gums. Damage to teeth and gums may occur if any other part of the unit touches them.

• The product is designed for oral cleaning only. DO NOT use the unit for any other purpose.

• As with any other new oral hygiene program, individuals with heart problems should check with your physician prior to using the Interplak® Dental Water Jet, and should always exercise particular care with any oral hygiene device.

• The Interplak® Deluxe Water Jet is a personal care unit and should be handled with care.

• Do not immerse the unit in water or any other liquid.

• The unit is designed for use in a 120 volt AC, 60 Hz outlet. Never force the plug into the outlet.

• DO NOT operate the unit if it has a damaged plug, if it is not working properly, if it has been dropped or damaged, or if it has been immerged in water. Refer to an Authorized Service Center for repair.

• DO NOT excessively bend or pull the cord. Unplug the unit by grasping the plug – NOT THE CORD.

• Keep the cord away from heated surfaces.

• Close supervision is necessary when this product is used by, on, or near children or disabled persons.

• Use this product only for its intended use as described in this manual. Only use attachments recommended by the manufacturer.

• Never use while drowsy.

SAVE THESE INSTRUCTIONS
Instructions For Use:

1. Remove dual tank and fill each tank with one of the following solutions:
   - Water .................................. to flush away food debris.
   - Mouthwash ...................... to wash away debris and bacteria, reducing the number of oral microorganisms. Provides short term halitosis control and leaves mouth tasting fresh and clean.
   - Antibacterial Rinse ...... recommended for the treatment of periodontal conditions and control of dental cavities, bacterial plaque and gingivitis.

2. Place dual tank securely onto Water Jet base.

3. Attach selected Tip to the handle.
   - Standard Tip .................... removes trapped particles from between teeth.
   - Subgingival Tip ............... uses a soft rubber tip to massage the gums and safely deliver solution into the gingival pockets below the gumline.
   - Brush Head Tip.............. loosens debris and larger food particles before flushing them away – ideal for all dental work, including fixed and removable appliances.

4. Select the tank you want to use first by switching the Dual Tank Control to the desired position. You can alternate between tanks during oral irrigation. For example, use water to remove all food and debris first, and then switch to the other tank containing mouthwash or an antibacterial rinse for extra cleaning and protection.

5. Hold the handle over the sink; turn the Water Jet on.

6. Select the pressure you want by adjusting the Pressure Control. *It is recommended that you select the lowest setting first and gradually increase water pressure until it is comfortable.

7. Press and hold the Water Stop Button to temporarily halt the flow of liquid while you place the Tip into your mouth.

8. The direction of flow from the Tip can be controlled by twisting the Tip to the desired position on the handle.

9. Leaning over the sink with the Tip in your mouth, release the Water Stop Button to begin flow. Keep your mouth slightly open, tilt your face toward the sink, and hold your elbow at mouth level to prevent water or rinse from running onto your hand.

10. Direct the Tip to the appropriate area of the teeth or gums:
    - Standard Tip - direct flow toward areas in between teeth.
    - Subgingival Tip - use with gentle pressure, directing flow just under the gumline.
    - Note: Avoid excessive pressure which could contribute to the development of periodontal abscesses or force bacteria into the soft tissue.
    - Brush Head Tip - position against tooth surface at 90 degree angle, focusing the spray on the area between teeth, and using a gentle brushing motion.

11. Move the Tip around the mouth sequentially until you have treated all areas in need of oral irrigation.

12. If unit has not been used for some time, please refer to initial preparation section.

2 Year Limited Warranty

Conair warrants to the owner of this Interplak® Dental Water Jet that it is free from defects in materials and workmanship for a period of two years from the original date of consumer purchase. This warranty does not cover damage to the product as a result of misuse or accident and does not apply to attachments (in New Jersey, all warranties are limited to the length of time stated in the original warranty).
